

SAP Business One and Beas Manufacturing are the **base tools** for a new way of working

Franz Hof GmbH is a modern and medium-sized company with a passion for CNC sheet metal processing and stands for outstanding quality and an incredible depth of different processes, from design to production to logistics. Since more than 50 years, the company is standing for the professional interaction with its customers, suppliers and employees and is constantly growing. Honesty and transparency in all development steps, in communication with each other and in constant exchange with suppliers and customers, are the success factors of Hof CNC and the basis for a healthy and successful business relationship.

Customer Challenges

Previously, there was a typical shopfloor organization without production planning, and the processes involved a lot of manual work.

The complexity had to be reduced with a simple solution that we can expand step by step and that supports us in the question: "How can we help our customers to do their business better?"

Solution

SAP Business One and Beas Manufacturing were selected after an intensive evaluation phase.

In cooperation with our partner AdS Consulting GmbH, planning and conception for the implementation of the new ERP system was successfully realized.

Results

Today we have an integrated production planning and were able to fully map the technical and administrative departments.

The company was changed from push to pull production and at the same time a management structure was created that encourages growth.

The workflows have been optimized so that we produce more efficiently and meet our customers' requirements better.

"OUR WORK HAS CHANGED FUNDAMENTALLY, AND OUR EMPLOYEES CONTINUE GROWING WITH THE PROCESSES IN THE COMPANY"

Carlos Schmidt / Managing Director
