Lipson Cosméticos Ltda improves their production and quality control with Beas Manufacturing and B1 Usability Package

Lipson Cosméticos is a Brazilian cosmetics company that handled a lot of their quality control processes manually and responded to the market's demand using Excel as their main management tool, with space for human error. Automating processes was key to this company and made it possible for them to even share internal data in real-time with their clients, improving their production and quality control, as well as accelerating and personalizing KPI reports to suit their needs.

Challenges

- The lack of functionality in the previous system
- Using Excel sheets to respond to the market's demand
- The manual processes were not error-proof
- Quality analyses done on paper and too many paper files stored

Solution

- Automating processes with Beas's MRP2 and APS modules to integrate with SAP Business One the production planning and control in one system and optimize those processes
- Quality management through Beas to stop archiving paper and have digital access to data, as well as optimized reports

Results

- Accelerated access to information in KPI reports with B1UP
- Customization of those reports
- Improved production, quality controls, and use of dashboards
- More stable production and real-time access to data that can be provided to the client with any browser thanks to B1 Dashboards

"(WITH BEAS) OUR PRODUCTION BECAME MORE STABLE, WITHOUT ERRORS, AND EASY TO INTERACT WITH. (...) SOMETHING I ALSO USE A LOT ON A DAILY BASIS IS THE B1UP ADD-ON (...), THE CUSTOMIZED REPORTS FROM THIS ADD-ON ARE WONDERFUL."

André Fortes / Manufacturing Manager
