B1 Usability Package

FEATURED PARTNER

N'ware Technologies

Wood Stone Corporation, based in Bellingham, Washington, has been manufacturing stone hearth and specialty commercial cooking equipment for the foodservice industry since 1990. They have more than 18,000 installations in over 80 countries worldwide. Their standard and custom ovens appeal to a variety of market segments around the world looking for unique and reliable restaurant equipment.

Customer Challenges

- We had limited functionality with the base SAP Business One product.
- We were not able to query data and add custom fields as we needed
- Decreased productivity as their information was segregated which created inaccurate information.

Solution

- The B1 Usability Package gave us the ability to make SAP B1 align with the way we that we work by giving the product customization capability.

Results

- The B1UP adds functionality that is lacking in the base SAP B1 product, but this functionality made a world of difference to our ERP.
- It gave us the capability to capture data and query on it in a way that would not be possible without the add-on.

"Although the addition of custom fields seems small, the improvement our business experianced was large: We managed to improve our productivity by 50%."

Nate Capone
