ZEYCO reduced its data entry errors and improved significantly the capture times with B1 Usability Package

Zeyco is a Mexican company dedicated to the manufacture and distribution of materials for dental and oral health. For more than 40 years they have given themselves the task of offering quality products that satisfy the needs of dentists in Mexico. This has positioned them as a leading company in the dental field with a variety of basic products for the dental office specializing in dental anesthetics.

Customer Challenges

- Constant errors in data entry in various processes. Slowness in the performance of the database due to duplicate information. Low quality of information.

- Data entry errors caused many reworks and delays in purifying the information for decision-making.

Solution

- Increase the potential of their ERP, automate processes, and create new business rules.

- Boyum IT's documentation allowed them to continue developing the solutions by themselves.

- The graphical dashboards have been a great aid in decision-making.

Results

- Capture data validations were developed, buttons and tabs were integrated to improve reports, and personalized boards were created with each department's information to make it easier to search and fill in data.

- Rework due to capture errors was eliminated. The request for special queries and many excel reports were replaced by dashboards.

"Boyum has changed the perception of using our ERP, turning it into a more user-friendly and intuitive tool. for the company, it has meant savings in time and more transparent data."
