FEATURED PARTNER

OPTI-ONE

Specialist in the manufacture of flake ice machines for more than 60 years, Geneglance is one of the worldwide leaders. Geneglance used an aging ERP, together with multiple disparate systems, which did not provide an integrated overview of its production processes. Therefore, the company chose SAP Business One and Beas Manufacturing. Thanks to this solution, Geneglance now benefits from real-time savings, greater data reliability, and better efficiency.

Customer Challenges

- The existing solution met our needs, but it was difficult to handle and technologically outdated.
- This constraining aspect and this lack of flexibility jeopardize the flexibility necessary for any SME to develop
- The production department (the company's core business) used multiple IT solutions in order to get reliable data.
- This time-consuming process was not able to optimize the efficiency and productivity of the production teams.

Solution

- In the final choice for the replacement of Axapta, two vendors were selected: SAP Business One / BOYUM IT (Beas Manufacturing & B1 Usability Package) and PROGINOV.
- The experience and reputation of SAP & BOYUM IT made the difference in this final decision.
- The multiple solutions issue concerned the material traceability, production tracking, the BOM, and routing as well as the document editions.
- Now, with Boyum IT solutions, the whole process is fully integrated with a single workflow: Quality / Traceability / Regulatory Documentation.

Results

- Boyum IT's solutions allow a 50% time-saving in production administration management.
- B1 Usability Package: enrichment of SAP Business One / BOYUM interfaces (customization of forms, creation of shortcut buttons, automation, colors, etc.).
- Beas Manufacturing: the ability to manage the whole production process in a single solution. An advanced production management solution that enriches the standard functionalities of SAP Business One, with, for example, the possibility to quickly create product variants thanks to the Beas configurator.

"THE RESULT IS INCREASED PRODUCTIVITY AND EFFICIENCY IN SALES ADMINISTRATION AND PRODUCTION DEPARTMENTS AS WELL AS A BETTER TRACEABILITY OF THE PROCESSES."

Mathieu MOYON / Responsable Production, GENEGLACE
