LEBLAN improves its efficiency, communication and reliability with Beas Manufacturing

LEBLAN is a Spanish company dedicated to the provision of facilities, technology, and machinery for the industrial sectors of concrete, aggregates, waste treatment, and various construction areas of sand. With a proven experience of more than 50 years and a large team of professionals, they carry out "turnkey" solutions by satisfying all customer needs, and fully developing all phases of the project.

Customer Challenges

- Cost controlling in real time of the supply chain and production management improvement.
- Unknowledge of profit margin and problems on making decisions and future investments because of missing information.

Solution

- The interface is very intuitive and user-friendly. The structure and modules of SAP Business One and Beas are a workflow guide for the internal processes.

Results

- Sales, engineering office, finance, and production have been improved.
- Now they can analyze the production times and work on having access in real-time.
- Improving the workflow in the machines and taking quick decisions with the cost to be reviewed. This way sales prices are more competitive, and they can get more business opportunities.

"THE BEAS MANUFACTURING ENVIRONMENT COVERS ALL CURRENT NEEDS AND HAS THE CAPACITY TO BE ADAPTED TO OUR GROWTH EXPECTATIONS."

Jose María Navarro / Manager assistant
