boyumit

Stahmann Webster obtained a 70% increase in Warehouse Process Productivity with Boyum

Stahmann Webster (SW) is a well-established, vertically integrated agribusiness, being Australia's largest grower of walnuts and pecans, and an emerging grower of macadamias and almonds. SW is a processor, packer, and global supplier of walnuts, pecans, and macadamias to wholesale and retail markets. The Company has a long history of technical and process innovation, having pioneered the development of insecticide-free farming methods at its pecan orchard "Trawalla" at Pallamallawa, NSW, and led the development of tree nut processing in Australia since the 1980s.

Customer Challenges

- Their previous system had rudimentary warehousing.

- Multiple spreadsheets were used to manage manufacturing and warehousing. A time-consuming affair.

- The scan guns acted as a glorified data entry terminal. This was not an efficient way of managing the warehouse and led to inventory discrepancies.

Solution

- User efficiency and simplified processes of managing items in the warehouse.

- Stock counting through the Cycle Count process has enabled the finance and warehousing teams to manage discreet and entire warehouse checks and account for stock variations far quicker. If there are discrepancies in locations, they can be identified and re-counted if necessary.

- Using batch traceability, it is easy to identify what has been used in the creation of the Finished Goods.

Results

- Accuracy on individual units is at a higher percentage.

- Inventory checks, SSCC Checks, and Location Checks all through the scan guns. Picklists now have key information, Product Description, and UOM for individual requisites.

- Stock takes procedure through the scan guns has allowed operation timeframe to be quicker and more effective as it can be exported to Excel for reconciliation.

"Timeframe of completing Pick, Pack, Transfer, Receipting through the scan guns has been a highlight."
